Algorithm Audit

Flowchart – Pre-scan DPIA (Art. 35 GDPR)

This schematic representation shows the logic the Pre-scan DPIA uses to determine whether a DPIA is mandatory or recommended: the check for new legislation or regulations, the sum of the risk scores per question (personal data, data subjects, scale, frequency, retention period, transfer) and guidelines of the Dutch Data Protection Authority (AP) and the EDPB. The complete questions can be found in the Pre-scan DPIA tool itself.
